PAT TESTING

Location **North, Northumberland**
https://www.freeadsz.co.uk/x-298884-z

What does a PAT test consist of?
We start with a visual inspection checking for:
Damaged flexes
Damaged plugs and equipment (overheating, burn marks, discolouration)
Correctly wired plugs
Correctly rated fuse
Then a series of tests (depending on the class of equipment), they may include
Earth continuity testing
Insulation resistance
Polarity test
Earth leakage test
Does PAT Testing affect our insurance cover?
Insurance companies assume that when giving insurance cover to a business, the owners of that business are complying with all regulations necessary. An insurance company may reduce, delay or even refuse to pay on a claim for damage if an appliance that has not been tested has caused the damage. Check the details on your policy if you are unsure today rather than find out too late when a claim is needed!
We At Tyne And Wear Electrical PAT test across the North East of England
How much will my PAT testing cost?
For the first 30 appliance: £80.00
31-100: additional £1.00/item
Another items please ask for a quotation
