

CYTOTEST - The most reliable method for weight loss

Location **South East, Surrey**
<https://www.freeadsz.co.uk/x-232469-z>

Very often we follow a diet but we do not lose weight. The one to blame is food intolerance. Aliments such as latuce, tuna, carrot, chicken etc are considered as "light" and they are usually part of different diets. Still, if we cannot tolerate these aliments, they are not correctly metabolised, "blocking" our organism. The food intolerance test indicates the aliments that we must avoid for a certain period of time (usually 2-3 months) and the results (weight loss) are spectacular, even in the first!
