This 7 Inch Android 4.4 Tablet has a Quad Core A33 CPU, Mali-400 GPU, 8GB Internal Memory as well as OTG support.

7 Inch Android 4.4 Tablet

Here is a great example of a nicely spec tablet that is being offered at an extremely low wholesale price. The tablet is known as Eta, which is the seventh letter of the Greek alphabet and the reason for that is this tablet has a 7 inch screen. With a 7 inch screen, this tablet is easy to carry around and will not weigh you down unlike larger tablets; however the screen is still big enough to enjoy watching media and interacting with games. Powering this touch screen tablet is a A33 quad core A9 processor, which is supported by a Mali-400 GPU and 512GB of RAM to provide an overall strong performance when multi-tasking as well as other usages.

Coming with Android 4.4 KitKat pre-installed, this tablet uses one of the most modern operating systems to date to allow more practical uses so you will get the most of the Eta. Furthermore, there is Google Play store to get all the latest apps and games to keep you busy and entertained when using this 7 inch tablet. A cool feature is that this tablet has OTG support so you can connect an external hardware device such as a keyboard and use this tablet like a computer.
