

Burton Mission Smalls Snowboard Binding with Mounting Hardware (69.99 GBP)

Location **Scotland, Ross-Shire**
<https://www.freeadsz.co.uk/x-475049-z>

Big brother performance and strength, in a package that's been perfected for younger rippers. As the most proven and comfortable kid's binding in snowboarding, the Burton Mission™ Smalls offers a softer flexing, zero-compromise package for dependable all-terrain action. Ergonomic, team-designed hi-backs join forces with pro-grade straps and plenty of cushioning to give kids every comfort possible. Available in two formats, the Mission Smalls lets you dial in performance by choosing between EST® and Disc. Be like the Burton team and experience ultimate flex, feel, and adjustability by mounting the EST® version to a Channel-equipped board like the ProTest, or stick with the classic feel and across-the-board compatibility of the Disc version.

Highback

The simplicity of a one-piece hi-back means immediate response. Through material blends Burton manipulates the overall flex profile—from buttery to responsive. The Canted Hi-Back Design follows the natural contours of your left and right legs to maximize control and comfort. The higher the Forward Lean angle on your hi-backs, the quicker your heel-edge turns. Crank 'em forward for icy hits in the pipe like Danny does, or back 'em off for jibbing like Keegan.

Baseplate

Lightweight, Bomb-Proof Polycarbonate is buttery and playful for laid-back, relaxed cruising. With a minimized, cored baseplate and Living Hinge™ disc, Re:Flex™ dramatically improves board flex and feel, and reduces weight. FullBED cushioning offers a full coverage, cushioned platform that maximizes

comfort while minimizing fatigue. Anchored to the baseplate, its stealth trap door design makes it easy to

change sizes. Flex Snowboard Straps are made with a specially stretched binding zone that allows the heel strap to flex and fall fully open. Thanks to science of forced molecular alignment, the Flex

is also stronger, making it worthy of Burton's Lifetime Warranty. Smooth Glide Buckle Technology features lightweight aluminum and lightweight polycarbonate levers that give you season after season of

better smooth and reliable latching power.

Features Single-Component Baseplate, Lightweight, Bomb-Proof Polycarbonate Disc, New Single-Component Hi-Back Construction, Canted Hi-Back Design, MicroFlex™ Aysr, Luxstrap™ Primo Capstrip™
