ISA Computers and ISA motherboards come in various form factors like ATX, Baby AT and Micro ATX. In terms of CPU compatibility, there are just a couple of options for Pentium 4 and the rest are for Pentium III, II and the good old socket 7 Pentium CPUs. They only accept IDE hard drives so companies like Interloper.com keep a decent stock of such older IDE hard drives, CD-ROM drives, network cards, ISA video cards and even ISA modems. Yes some applications still require ISA modems. Hard to believe but it's true.

You can read more about ISA Computers on their blog at <http://baber.com/isa-computers/> or call them at 972-245.
