What is a Fire Marshal? A Fire Marshal, also known as a Fire Warden, is a person responsible for Fire Safety measurements within a company and/or a building. The Fire Marshal has to undertake professional training with regards to what precautions need to be taken, how to maintain fire extinguishers, maintaining the fire evacuation details in place together with fire exits, fire lights and fire alarms.

By law every company or building must have Fire Marshals in place for the safety of the employees and any visitors. The number of Fire Marshals needed will be noted upon undertaking a Fire Risk Assessment. There are businesses that are classed as high risk therefore they need more Fire Marshals trained, i.e. care homes, hotels, schools, building sites, etc.

This course covers the role of the designated fire marshal. It also gives you the opportunity to learn about the different types of fire extinguisher and how to use them correctly (due to environmental issues there will be no live demonstrations).

Who should attend?

This course is suitable for those who are responsible for overseeing fire safety, designated fire marshals and those who need to know how to use the means of escape, fire alarm and what to do in a fire.

The course will present a fire right into your organization and show you the precautions that you need to put in place to protect your knowledge of how to be a fire marshal for a fire.

Course content

- Explain how fires are caused in the workplace
- Describe the components of the fire triangle
- Identify the hazards during or after a fire, including the products of combustion
- Describe the characteristics of fire and smoke spread
- State the different methods used to identify and control fire hazards
- Define the term 'means of escape' in relation to fire hazards
