

Clinical Massage Therapy for Specific Pain and Stress Issues

Location **South East, West Sussex**
<https://www.freeadsz.co.uk/x-542938-z>

Our deep tissue massage is a holistic fusion of East and West. Deep tissue, trigger point therapy, myofascial release and hot stones combine to give you the most relaxing, pain relieving and healing experience possible. Each massage will focus on what is needed by the client, be it pain relief in a specific area, tension or stress

Deep-tissue massage targets the deeper layers of the muscles, where soreness typically begins. It helps specific relieve pain and aches in the muscles and also encourages circulation your body to accelerate healing.

Hot stones warm and relax the muscles before being worked on. They target sore areas, kneading the muscles and increasing circulation, which support a faster post-workout muscle repair and ease general pain. It is also nurturing and comforting and an excellent relaxant.

Trigger point therapy works on specific pain areas for those who need it. Trigger point massage therapy is specifically designed to alleviate the source of the pain through cycles of isolated pressure and release. In this type of massage the recipient actively participates through deep breathing as well as identifying the exact location and intensity of the discomfort. The results and benefits of trigger point massage are releasing constricted areas in the muscles thus alleviating pain. You can experience a significant decrease in pain after just one treatment.

Myofascial release - Fascia is the netting of connective tissue that connects muscle to bone and covers our entire body. Myofascial release therapy helps the fascia which is 'stuck' and immobilised move freely

again, which relieves pain and improves flexibility. Fascial restrictions do not show up on CAT scans

and X-rays the only way to find them is by palpating under a skilled physical therapist's hands

When the fascia is stuck it can pull on the muscles which have been attached to it. This can lead to chronic pain and stiffness

in the muscles which have been attached to it. This can lead to chronic pain and stiffness

in the muscles which have been attached to it. This can lead to chronic pain and stiffness

 Clinical Massage Therapy for Specific Pain and Stress Issues

We all expect to feel sore after intensifying our workouts, lifting more than we are used to, adding reps, trying something for the first time, or working the muscles in an unusual way. The soreness is usually a good thing and means the muscles are building. Massage performed after a workout helps to relieve the effects of muscular fatigue.

Massage relieves soreness and stiffness and it encourages the muscles to maintain flexibility and looseness. The joints, tendons and ligaments are also helped in the same manner. Massage assists the body to easily transport nutrients and oxygen to the muscles because of the enhanced blood flow.

MASSAGE IS GOOD FOR RELAXATION

Research has shown 80% of chronic disease is stress related. Everyday annoyances like heavy traffic or an overwhelming inbox—or sustained crises, such as unemployment or caring for a sick relative—can cause the body to activate the stress response constantly, which is called chronic stress. The body and brain can't reset hormones and inflammatory chemicals to normal levels, damaging the immune system, and shrink the blood vessels, inhibiting circulation. A stressed mind and body means the heart works harder. Breathing becomes rapid and shallow, digestion slows. Nearly every body process is degraded and making you far more likely to get sick. Stress is a main contributor to chronic disease, such as cancer, heart attacks and diabetes. Studies show stress can cause migraines, hypertension (high blood pressure), depression, some peptic ulcers, etc. If you are experiencing any type of regular stress then regular massage is essential. It will counteract the effects of stress and give your body the time to recuperate and recover, which is vital to your health.

A short block of weekly massage followed up by a monthly top up can rid the body of many types of pain and keeps them at bay. It also benefits circulation - function of the lymphatic system - digestion - gets rid of toxins - creates more energy - enhances deeper sleep - improves concentration and mental outlook - enhances calm and creative thinking. As well as soothing aches and pains massage also encourages the skin to heal minor abrasions. Give yourself the time out you so truly deserve, after all it's your body, are you looking after it in the way it needs and?
