

# COMFREY PLANTS (2 GBP)

Location **Wales, Mid Glamorgan**  
<https://www.freeadsz.co.uk/x-543552-z>

Comfrey is used as a green manure, its leaves make an excellent liquid feed for plants that is both high in potash and minerals. Great for feeding tomatoes and other plants. Comfrey is a perennial plant that grows rapidly. It has many other uses including use as an activator in compost heaps to speed up decomposition of other plant material. I have a number of plants that I have grown on in 9cm pots at £2.00 each (for collection only in pots) and are surplus to my requirements.

Growing comfrey is a great way of 'gardening on a budget' as once you have the plants growing well the leaves can be chopped back and used time after time.

I am able to send 4 plants that are cut back and made bare rooted in the post for £10 including post and packing. This method will require the plants to be unpacked and planted up in containers or in the garden and watered in immediately on receipt. Payment can be accepted by PayPal.

I will provide written advice on how to use comfrey either when plants are collected or posted out.

Please note the variety of comfrey I have is Bocking 14 . This variety does not self seed.

I also have a range of other shrubs, perennials, alpines and herbs for sale. Please see my other adverts on this site.

From time to time I also have seasoned firewood logs for sale at £45 for a jumbo bag (approximately one cubic metre), collection only, please contact me to check.
